```java
package com.itbulls.learnit.javacore.oop.inheritance;

public class Demo {

    public static void main(String[] args) {
        Product product = new Phone();
        product.setName("Nokia 1100");
        System.out.println("Product name: " + product.getName());
        System.out.println("Remaining amount in stock: " +
product.calculateRemainingAmount());

//              product.ring();

        Phone phone2 = new Phone();
        phone2.ring();

        if (product instanceof Phone) {
            Phone phone3 = (Phone) product;
            phone3.ring();
        }

        System.out.println(phone2.calculateAmountOfVariants());
    }

}
```
